Graduate Teaching Assistantship in Urban Forestry Available for Fall, 2018
Oregon State University
Corvallis, OR

The Oregon State University College of Forestry has an urban forestry teaching assistant position available for a highly motivated graduate student starting Fall 2018. The selected candidate must apply to, be accepted to, and enroll in a Master of Science or Master of Forestry degree in the Forest Ecosystems and Society graduate program and in the Graduate Certificate in Urban Forestry.

Applicants should have a Bachelors degree in a natural resources or environmental oriented field from an accredited university with a 3.0 undergraduate GPA, three letters of recommendation, and GRE scores. Additional work experience in the field of urban forestry, arboriculture, or related fields is desirable but not required.

Responsibilities include serving as a teaching assistant for online undergraduate courses in urban forestry and arboriculture at the rate of one class per quarter, serving 20-40 students per term, including managing online discussion boards and grading quizzes and written assignments. Enrolled graduate students must make progress towards the completion of a Masters degree.

During the appointed terms, the selected candidate will receive a tuition waiver, monthly stipend (currently $1,185.60 per month for 9 months) and subsidized health insurance. Additional scholarships and fellowships may be available on a competitive basis.

Although the teaching assistantship is for online courses, this is an on-campus position that requires residence in the Corvallis area since the student will take both online and on-campus courses as part of the Masters degree program.

For additional information, contact Dr. Paul Ries, Director of the Graduate Certificate in Urban Forestry at paul.ries@oregonstate.edu or 541/990-7660.

Graduate School applications for the 2018-19 academic year are now being taken. Admissions decisions are typically made in January and there is only one assistantship available.
