Job Opportunity in Vegetation Management

Date: Summer (May to August, 2020)

Requirements: Willingness to work outdoors, occasionally in adverse weather conditions. Some travel may be required.

Responsibilities: Student will assist in field based research and education programs on road side vegetation management. This includes management of invasive plant species as well as promotion of pollinator habitat. Responsibilities include assisting in establishment of field plots, data collection and evaluation, maintaining ongoing trials, and assisting with education programs, such as field days. Student may also gain experience in other weed science and turf research programs. Student will receive hands on experience in vegetation management, weed science, and research methods.

Competitive hourly pay. Good experiential learning opportunity (can be for credit).
