Graduate Fellowships in Forestry and Environmental Resources Available for Fall 2020

An awesome opportunity exists for a student interested in a Master’s degree in Forestry and Environmental Resources within the College of Natural Resources at NC State University. Fellowships are available through the USDA National Needs Fellowship program. Successful candidates would focus on projects which could include (but will not be limited to) the following topics:

- Financial aspects of forestry and forest management
- Field assessments or human dimensions of excess water and forests
- Evaluating intercropping in forest plantations
- Soil sustainability and productivity in a natural and/or planted forested ecosystem
- Diversity in the field of forestry and natural resources
- Forest extension and outreach engagement

The fellowships are fully funded assistantships with opportunities to work with a forest industry partner, non-profit agency and/or government agency. For more information please contact Dr. Zakiya Leggett, zakiya_leggett@ncsu.edu and email CV and transcripts (unofficial).

Minimum qualifications for these fellowships include a B.S. degree in biology, chemistry, soil science, forestry, environmental science, ecology, natural resources or a related discipline. We are seeking to develop a cohort of diverse students and strongly encourage applications from students traditionally underrepresented (i.e., African-American, Hispanic, Native Americans, etc.) in forestry and forestry related fields.

Application review will begin April 20, 2020.
